

NoetixViews® Implementation — Operational BI

Accelerate the Deployment of Key Information to Users

Designed to help you get the most value from your Noetix software investment, the NoetixViews® Implementation puts your business on a fast track to making more informed, data-driven decisions. Noetix Professional Services collaborates with your business and technical teams to ensure your organization efficiently and effectively deploys Noetix software for maximum business benefit and streamlined technical maintenance.

Based on best practices, the NoetixViews Implementation follows our proven methodology for successful reporting initiatives—The Noetix Approach. The Noetix Approach includes four distinct phases: Define, Install, Train, and Deploy. The three-week engagement is focused on activities designed to accelerate the deployment of key information to users.

Define

The Define phase is the first step in the Noetix Approach. Activities and deliverables critical to a smooth rollout of NoetixViews across your enterprise are defined and documented. This approach will enable your organization to address change and help requests, define communications between end users and the individuals supporting the solution, and identify short- and long-range training goals. In addition, the documentation and implementation of processes to support the ongoing health and maintenance of the Noetix solution will help ensure an effective rollout and the highest possible levels of user adoption.

Install

Prior to installation, Noetix Professional Services will work with you to make sure your Noetix environment meets the recommended system requirements. Once onsite, Noetix will install and generate NoetixViews® and Noetix® Search along with generating content into your reporting tool of choice via Noetix® Generator.

Train

In this phase, Noetix will train both the Noetix Administrator and end users to ensure your organization is fully prepared to manage and maximize the use of the Noetix solution.

Noetix Administrator Training and Mentoring — Your designated resource will work side-by-side with Noetix during implementation, and will even drive most of the activities. Subsequent to installation, Noetix will provide formal training for your technical staff focusing on usage of the Noetix tools and maintaining a healthy software environment. In addition, the Noetix Administrator will participate in report developer training so they are completely capable of utilizing the tools from an end user, as well as a technical, perspective.

Report Developer Training — A formal training class will be provided for all NoetixViews users including executives, basic/intermediate users, super users, and technical developers. The course focuses on the contents of NoetixViews, how to use Noetix Search, and report development best practices.

Deploy

The activities and deliverables in the deployment strategy component of our services are critical to a smooth rollout and successful adoption of your reporting solution.

Noetix will work with you to develop the right deployment strategy for your specific Noetix reporting goals by assisting in the creation of a plan for the following 12 critical deployment areas:

- ▶ Technical Platform Strategy
- ▶ Software Maintenance Strategy
- ▶ Security Model (administrators, query users, non-Noetix tools)
- ▶ Roles and Responsibilities

- ▶ Processes (end-user support, change requests, deployment of new functionality, security changes, etc.)
- ▶ Technical Education Strategy (training backup, future administrators)
- ▶ User Segmentation and Training Strategy
- ▶ User Adoption Strategy (rollout communication, feedback loop mechanisms, issue escalation processes)
- ▶ Custom Views Strategy (when and how to extend NoetixViews)
- ▶ Data Source Strategy (other data source requirements, options for integration with NoetixViews)
- ▶ Initial Rollout Strategy (rollout to production and other instances)
- ▶ Risks (review and identify mitigation steps for potential risk factors)

Maximizing the Return on Your Investment

The NoetixViews Implementation offers your organization the knowledge and skills needed to provide a foundation for the successful rollout of Noetix software. Noetix delivers a rapid implementation based on industry-standard best practices. Once our product is installed and your administrators and users have been trained, Noetix will work with you to assess what additional tools and services are required to integrate and leverage the Noetix software into a complete reporting and business intelligence solution.

Our relationship with our customers does not end after the Deploy phase. In fact, we believe it's only the beginning. Noetix Professional Services is committed to your success, available to address your future needs providing ongoing guidance through consulting, education, and technical support.
