

# NoetixViews®

for Oracle® E-Business Suite Global Extension

NoetixViews transforms the complexity of the Oracle E-Business Suite database into recognizable business views of data that are used by both IT professionals and business users to create custom reports and ad hoc queries. Using patented Noetix MetaBuilder™ technology, the views are automatically configured to support customer-specific setups, including key and descriptive flexfields. When Oracle introduces Oracle E-Business Suite changes, the views protect reports from breaking by remapping to the new database structure.

The NoetixViews Global Extension delivers these additional key features and benefits:

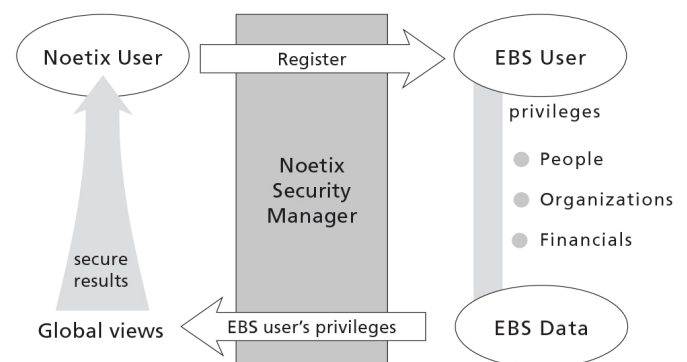

- **Enterprise-wide reporting:** data from all organizations is accessible from each global view
- **Row-level security:** the Oracle E-Business Suite user's data privileges are used to restrict the data returned by the global views, regardless of the BI tool
- **Release 12 subledger accounting (SLA):** use the global-only views of NoetixViews 6.3 for SLA for better period close, reconciliation, and financial analysis reporting
- **Drillable parent-child hierarchies:** use the parent-child hierarchies on segments of your chart of accounts to create drillable financial reports
- **Rapid Implementation:** fast installations and regenerations mean rapid deployment of upgrades, enhancements, and customizations

## Enterprise Reporting

The global views represent the smallest-ever footprint of NoetixViews while maintaining our unparalleled coverage of Oracle E-Business Suite. A single set of global views for each NoetixViews module delivers data from all business groups, ledgers, operating units, and inventory organizations in your Oracle E-Business Suite instance, thus providing the ideal foundation for standardized, enterprise-wide reporting. A single report based on a global view can be shared with anyone in the enterprise and row-level security will assure that users only see data in the report that they can also access in Oracle E-Business Suite.

## Row-level Security

Oracle E-Business Suite customers invest significant time and effort setting up and maintaining the access privileges to people, organizations, and financial data for end users. Row-level security in the global views puts this investment to use in reporting. Using Noetix Security Manager, users register their Oracle E-Business Suite username and responsibility. Security Manager then applies associated data privileges to the global views, assuring that the user only accesses the data they are supposed to.

The global views include support for the following data controls in Oracle E-Business Suite:

### **HR Security Profiles**

Enforces Oracle HR security profiles to protect sensitive personnel and compensation data

### **Data Access Set and Flexfield Security Rules**

Ensures that each user accesses the accounting data consistent with their ledger access and flexfield security rules

### **Organization Access**

Applies the user's Organization Access rules to supply chain, manufacturing, maintenance, and quality data

### **Operating Unit Access**

Restricts rows to the Multi-Org Access Control or Operating Unit profile options assigned to the user

### **Drillable Parent-Child Hierarchies**

You've already set up the accounting parent-child hierarchies for use in your Oracle E-Business Suite financial statements. Use those very same structures with the global views to create analytical reports in your favorite BI tool. Start at the highest level with fully rolled up balances, journal line, or transaction amounts and drill down to the next level of your hierarchy in just a few clicks. Continue drilling down, or drill back up and choose another branch of the hierarchy to analyze. Use a combination of hierarchies, such as a cost center hierarchy and a natural account hierarchy, to create pivot tables for analyzing your results in multiple dimensions.

### **Oracle EBS Release 12 Subledger Accounting**

As the hub of all financial activity in Release 12, subledger accounting holds a vast trove of information about your fiscal performance. Unfortunately, Oracle doesn't provide the out-of-the-box means for accountants and cost center managers to leverage their SLA data in ways that speed up business processes and reduce costs. Oracle's barriers to the data also prevent deep analysis and the development of innovative, new reporting solutions. Available starting with NoetixViews 6.3, a next-generation set of global views for SLA opens up access to this valuable data to deliver improved period close, reconciliation, audit, and account analysis reporting.

### **Intuitive User Interface**

It has never been easier for users to create a report or ad hoc query with NoetixViews. An all new application area-based presentation model created by the Noetix® Generator products for Oracle® BI EE, Oracle® Discoverer, IBM® Cognos® BI, SAP® BusinessObjects,™ Microsoft® BI, QlikView® and Noetix® Platform organizes the global views in an intuitive, easy to use format, requiring little or no end-user training. The same organization of the views is presented in Noetix® Search, creating a common experience between report authoring and the content analysis performed by Noetix Search users.

### **Enhanced Key Flexfield Support**

The global views untangle the complex internal storage of key flexfields by including columns with your key flexfield segment names, not the generic column names from the Oracle tables. Additionally, the global views return data for the special segment qualifier columns of the Accounting key flexfield. The global views include the Balancing, Cost Center, Natural Account, and Intercompany segment qualifier columns, making it easy for developers to write accounting reports and users to understand the data in these reports.

### **Availability**

NoetixViews Global Extension is available for the following:

- **NoetixViews for Oracle Financials**
- **NoetixViews for Oracle US Federal Financials**
- **NoetixViews for Oracle Supply Chain Management**
- **NoetixViews for Oracle Human Resource Management System**
- **NoetixViews for Oracle Discrete Manufacturing**
- **NoetixViews for Oracle Process Manufacturing**
- **NoetixViews for Oracle Service**
- **NoetixViews for Oracle Advanced Supply Chain Planning**
- **NoetixViews for Oracle Projects**
- **NoetixViews for Oracle Enterprise Asset Management**
