NoetixViews® for Oracle®
U.S. Federal Financials

To achieve strategic Agency objectives of efficiently and effectively managing operations and to comply with the financial management policy of the Federal Government, Oracle U.S. Federal Financials users must have system transparency. They need access to operational data in a fast, accurate, and secure manner to enable real-time data-driven responses to support the toughest questions and reporting requirements.

NoetixViews® for Oracle U.S. Federal Financials is the first commercially available Business Intelligence (BI) application designed and optimized for use by Federal Agencies. NoetixViews enables transparency by transforming the complex Oracle database into recognizable business views and pre-built reports tailored to Agency-specific configurations. Technical and nontechnical U.S. Federal Financials users alike employ these views and report templates to create custom reports and ad hoc queries. Users enjoy simplified access to the information they need with the functionality they are accustom to in Oracle U.S. Federal Financials, such as budgetary control, multiple line accounting on commitments, obligations and disbursements, cost accumulation and allocation, and account code structure maintenance—ultimately improving data visibility across Agencies and Organizations.

NoetixAnswers™

NoetixViews for Oracle U.S. Federal Financials comes complete with NoetixAnswers, pre-built reports that provide answers to common business questions without resource-intensive development. Like NoetixViews, the pre-built reports are automatically tailored upon installation to the Agency's Oracle E-Business Suite configuration. Delivered via Noetix WebQuery, NoetixAnswers allows nontechnical Agency personnel a cost-effective means to quickly locate a pre-built report and modify it with point-and-click simplicity.

Designed to Empower All Users of Oracle U.S. Federal Financials

NoetixViews, along with NoetixAnswers for Oracle U.S. Federal Financials, empowers users throughout Agencies with unprecedented access to accurate, timely, relevant data.

Executive Management can easily access key financial management measures and performance indicators such as burn rates on Appropriations to optimize management of funds throughout budget execution in support of financial accountability.

Program Managers can easily access detailed accounting information to proactively manage the lifecycle of funding from funds distribution through disbursement in support of operations execution and program accountability.

Analysts can easily access transaction details in support of financial analysis to detect and correct data issues when performing activities such as accounting reconciliation.

Functional Coverage

Subject areas covered by NoetixViews for U.S. Federal Financials include:

Funds and Budgets
▶ Funds Available
▶ Budget Appropriations/Authorizations
▶ Budget Distributions
▶ Funds Distributions

Purchasing and Payables
▶ Commitments
▶ Obligations
▶ Expenditures

Interagency Transfers

▶ Supplier Invoice Payment

▶ Cash Receipt

Cross Module Functionality

Cross-functional views provide funds visibility throughout the execution lifecycle, enabling users to see the information provided within the U.S. Federal Financials module and the detailed transaction data in General Ledger, Payables, Receivables, and Purchasing. Cross-functional views include:

▶ *FV_Budget_Transactions, FV_SLA_Budget_Trans (Release 12)*
   Budget transactions and their GL journal entries

▶ *FV_PO_Commitments, FV_SLA_PO_Commitments (Release 12)*
   Purchasing requisitions by Treasury Symbol or Fund

▶ *FV_PO_Obligations, FV_SLA_PO_Obligations (Release 12)*
   Purchase order obligations by Treasury Symbol or Fund

▶ *FV_AP_Expenditures, FV_SLA_AP_Expenditures (Release 12)*
   Payables expenditures by Treasury Symbol or Fund

▶ *AP_FV_Interagency_Xfers*
   Payables invoice payments for interagency transactions

▶ *AR_FV_Interagency_Xfers*
   Cash receipts for interagency transactions

Integrated Security

Views specific to the Federal Administrator responsibility enforce budget user security for Oracle E-Business Suite authenticated users. When using query tools like Oracle Discoverer or Noetix WebQuery that support Oracle E-Business Suite authentication, end users will be restricted to the budget data corresponding to their budget access level permissions defined in Oracle E-Business Suite. Further, the Noetix administrator can create custom budget user security policies that meet the unique reporting security requirements within an organization.

Generates Custom Business Views

Upon installation, NoetixViews generates business views that reflect Agency-specific configurations of the Oracle E-Business Suite implementation. Configured data fields such as key and descriptive flexfields and lists of values are made viewable and named based upon the setup. Additionally, columns indexed in the database are identified to help users create faster running reports.

Reduces Risk, Time, and Cost

NoetixViews offers complex business views, incorporating data from multiple tables and applications within the Oracle E-Business Suite database, to facilitate a self-service data environment for end users. This minimizes IT time and resources allocated to report creation as well as maintenance and upgrades.

Protects Your Investment

NoetixViews protects reports against changes to the Oracle data structure that are common during application upgrades and patching, thereby eliminating costly report maintenance and ensuring data integrity.

Provides Comprehensive Help Resources

To guide users through query and report development, NoetixViews generates comprehensive descriptions of the views and columns installed in the database, along with sample queries and hints on how to use them. This help file also contains information about Agency-specific configurations such as flexfields and lists of values.
