NOETIX CLOUD ANALYTICS

Enables greater operational efficiency for the Oracle ecosystem

SOLUTION OVERVIEW

The Noetix Cloud Analytics solution leads the way in addressing customers' needs for hybrid analytics architectures across Cloud and on-premises applications.

Building and extending on the rich legacy of NoetixViews, Noetix Analytics and RapidDecision, Magnitude's Noetix Cloud Analytics delivers packaged business analytics for Oracle ERPs to accomplish three main goals:

- **Achieve a 360 degree view of your organization**
  Enables data blending of business analytics across multiple Oracle ERPs (EBS, JDEdwards OneWorld, JDE EnterpriseOne, JDE World, PeopleSoft), as well as any other data sources for complete visibility across the business from one central reporting platform.

- **Control your journey to the Cloud**
  Enables the inclusion and blending of Oracle Cloud Applications (OCA) with any other source to facilitate a gradual migration to OCA.

- **Accelerate your Business Intelligence initiatives**
  The flexible architecture allows support for all popular BI platforms, including Tableau, Microsoft PowerBI, Qlik and others to leverage your existing investments.
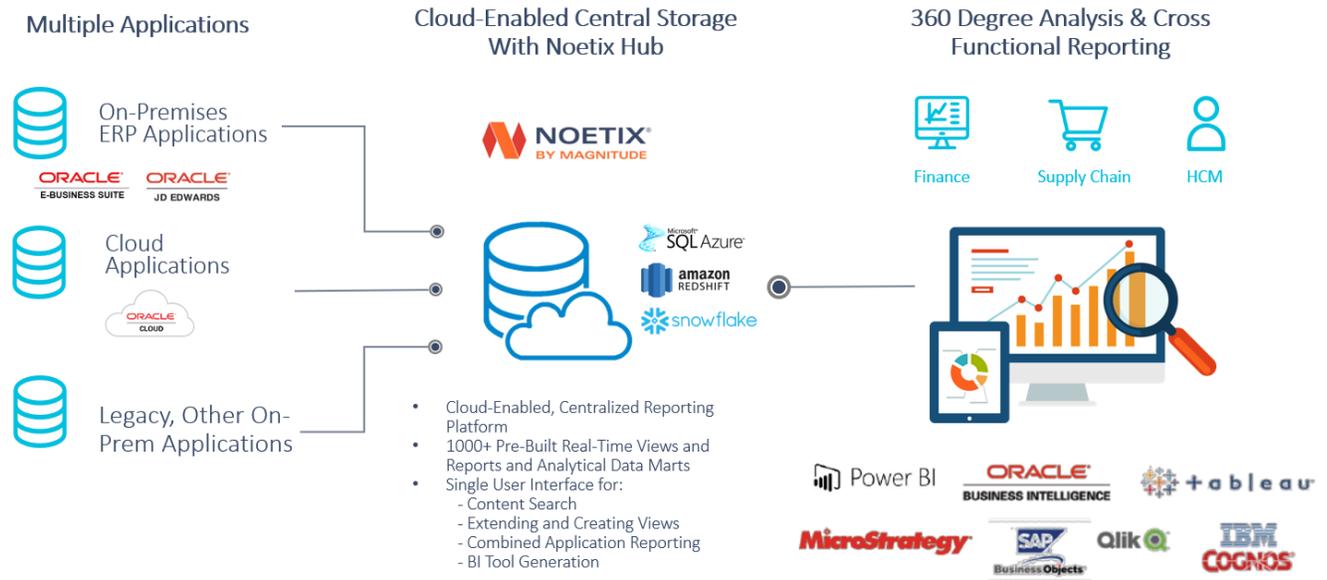

NOETIX CLOUD ANALYTICS — for Oracle and Beyond

As a centralized analytical platform, the uniqueness of the Noetix Cloud Analytics solution stems from the combined experience and knowledge from Magnitude's Noetix and RapidDecision product suites.

Noetix Cloud Analytics delivers support for combined reporting across multiple ERPs and external SaaS applications including Oracle Cloud Applications. Noetix Cloud Analytics provides near real-time replication and reporting views on the cloud based ODS tightly integrated with Noetix Hub.

Noetix Cloud Analytics is an exciting development for existing Magnitude Noetix and RapidDecision users who may also be interested in improving real-time performance and consolidated reporting across multiple ERP environments.
