

Automates the process of populating BI Tools with reporting objects

Noetix® Generator

With many organizations running a variety of BI reporting tools, Noetix Generator automates the manually-intensive process of populating each reporting tool with the reporting objects necessary for business professionals to develop reports without IT assistance. Noetix Generator significantly reduces the tedious effort in implementing BI applications by fully automating the integration of NoetixViews® and Noetix® Analytics within the reporting tool's metadata layer, saving administrators resource costs in supporting a diverse reporting environment.

Together with NoetixViews and Noetix Analytics, Noetix Generator completes the Noetix BI solution providing organizations with a true end-to-end enterprise reporting solution designed to help maximize the investment in Oracle Applications.

The Noetix Generator family of products includes support for the following BI platforms:

- Oracle Business Intelligence
- Oracle Discoverer
- IBM Cognos BI
- SAP BusinessObjects
- Microsoft BI
- QlikView
- Tableau
- Information Builders WebFOCUS

Noetix Generator for Oracle Business Intelligence

Noetix Generator automatically connects NoetixViews, Noetix Analytics, and NoetixAnswers with Oracle Business Intelligence (Oracle BI EE Plus and Oracle BI SE One). It extracts metadata from those sources and creates the Enterprise Information Model metadata layers, simplifying setup and ad hoc retrieval of data-base information. Noetix Generator also automatically creates NoetixViews report templates in Oracle BI Answers and Oracle Interactive Dashboards using the NoetixAnswers report definitions.

Noetix Generator for Oracle Discoverer

Noetix Generator automatically connects NoetixViews and Oracle Discoverer. It extracts metadata from Noetix views and creates business areas for Discoverer's end user layer, simplifying setup and ad hoc retrieval of database information.

Noetix Generator for IBM Cognos BI

Noetix Generator automatically connects NoetixViews and Noetix Analytics with IBM Cognos. It extracts metadata from those sources and creates models and packages in IBM Cognos' BI tools, accelerating the setup and ad hoc retrieval of Oracle business information. Noetix Generator also automatically creates reports in Cognos Report Studio using NoetixAnswers report definitions.

Noetix Generator for SAP BusinessObjects

Noetix Generator automatically connects NoetixViews and Noetix Analytics with SAP BusinessObjects. It extracts metadata from those sources and creates Business Objects universes, accelerating the setup and ad hoc retrieval of Oracle business information. Noetix Generator also automatically creates reports in Business Objects Web Intelligence using the NoetixAnswers report definitions.

Noetix Generator for Microsoft BI

Noetix Generator automatically connects NoetixViews and Noetix Analytics with Microsoft BI. It extracts metadata from those sources and creates models for Microsoft SQL Server Reporting Services (SSRS), SQL Server Analysis Services (SSAS), and Business Intelligence Semantic Model (BISM) accelerating the setup and ad hoc retrieval of Oracle business information.

Noetix Generator for QlikView

Noetix Generator automatically connects NoetixViews and Noetix Analytics with QlikView. It enables users to access Oracle business information by automating the creation and security of QlikView data load scripts without requiring constant IT intervention. In addition, Noetix Generator creates a data cache (QVD) layer for enterprise installations of QlikView, simplifying tedious administrative activities.

Noetix Generator for Tableau

Noetix Generator automatically connects NoetixViews and Noetix Analytics with Tableau for fast, cost-effective access to Oracle E-Business Suite (EBS) application data. Tableau doesn't have a semantic layer that organizes the data users can access. As a result, it can be difficult for Tableau customers to find the data they want to analyze. Noetix Generator for Tableau provides Tableau users with secure access to a more business-friendly view of their Oracle EBS data, reducing the strain on IT to provide assistance.

Noetix Generator for WebFOCUS

Noetix Generator automatically connects NoetixViews and Noetix Analytics with Information Builders WebFOCUS. It extracts metadata from those sources and creates WebFOCUS applications, accelerating the setup and ad hoc retrieval of Oracle business information. Applications provide rich access to business data, supporting performance tuned prompts and row-level data security.
